August 3, 2023

## Purpose: Distinguishing The i15 V1 From The V2

### Reason:

1. i15 V1 & V2 units look almost identical, so it can be difficult to recognize which version you are looking at. Even though they look the same, internally they are different. An easy way to tell which unit you have is by looking at the data plate located on the back of the unit. The model number for a V1 will read "15000", while the V2 reads "15000-2". Additionally, anything manufactured starting January of 2022 and forward, will be a V2 unit. Please see chart below:

**Model Number**

**Date of Manufacture**

**How to read the serial number** → Z10577-190529-02138

- Year: 19
- Month: 05
- Day: 29
